

Power Electronics

No. 13: Full-bridge Inverter

Takeshi Furuhashi

Furuhashi_at_cse.nagoya-u.ac.jp

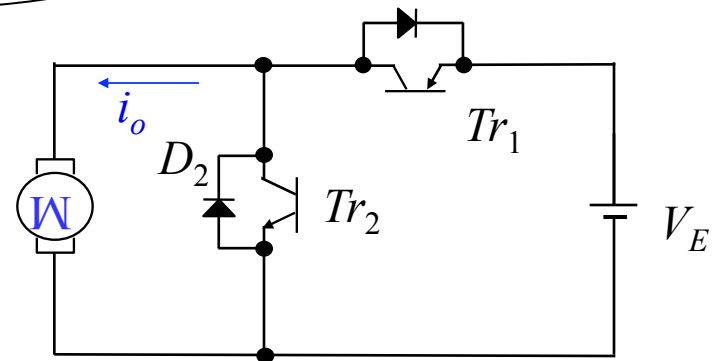

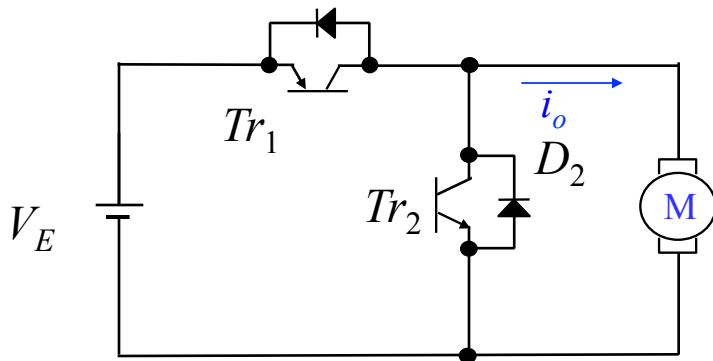

Half-bridge inverter

Two batteries are needed

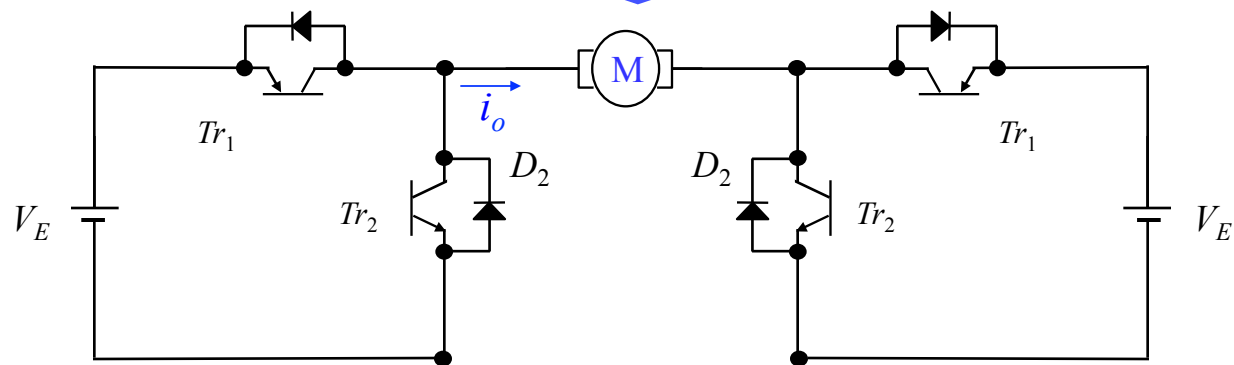

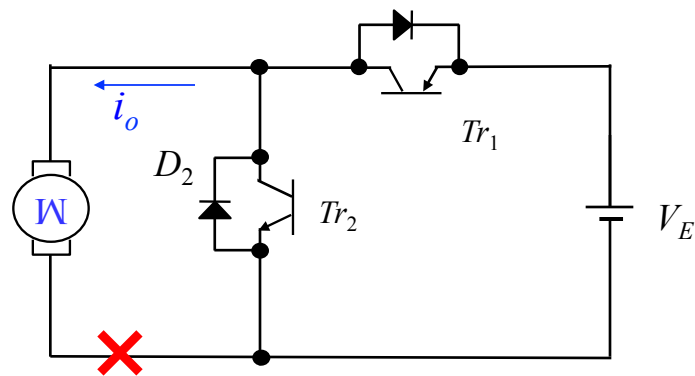

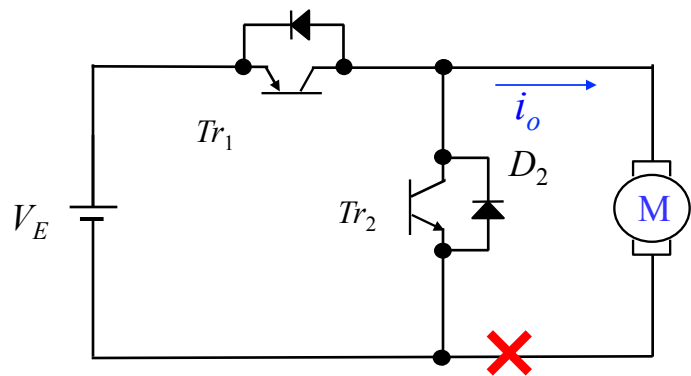

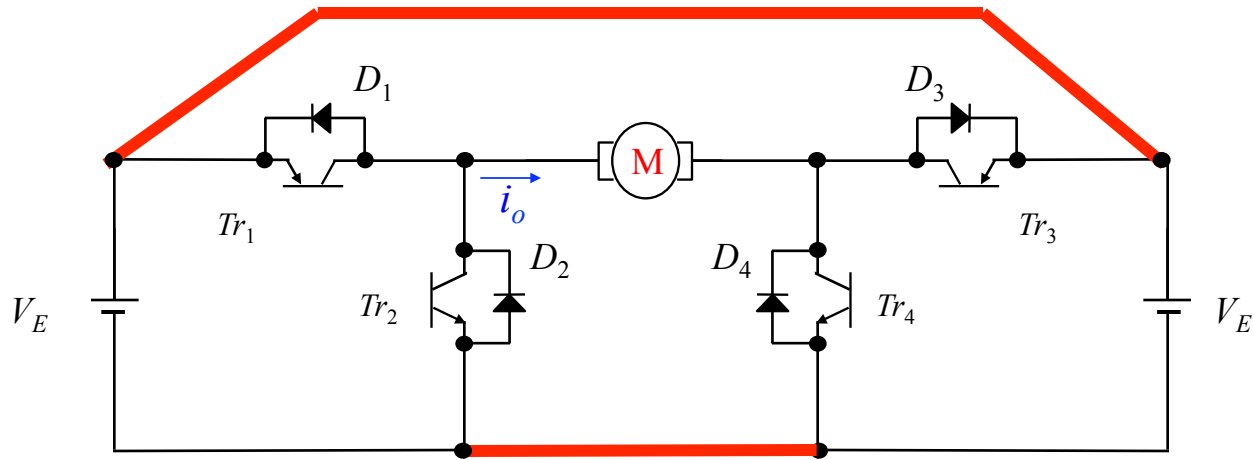

An inverter with one battery is more desirable.

How can these be integrated?

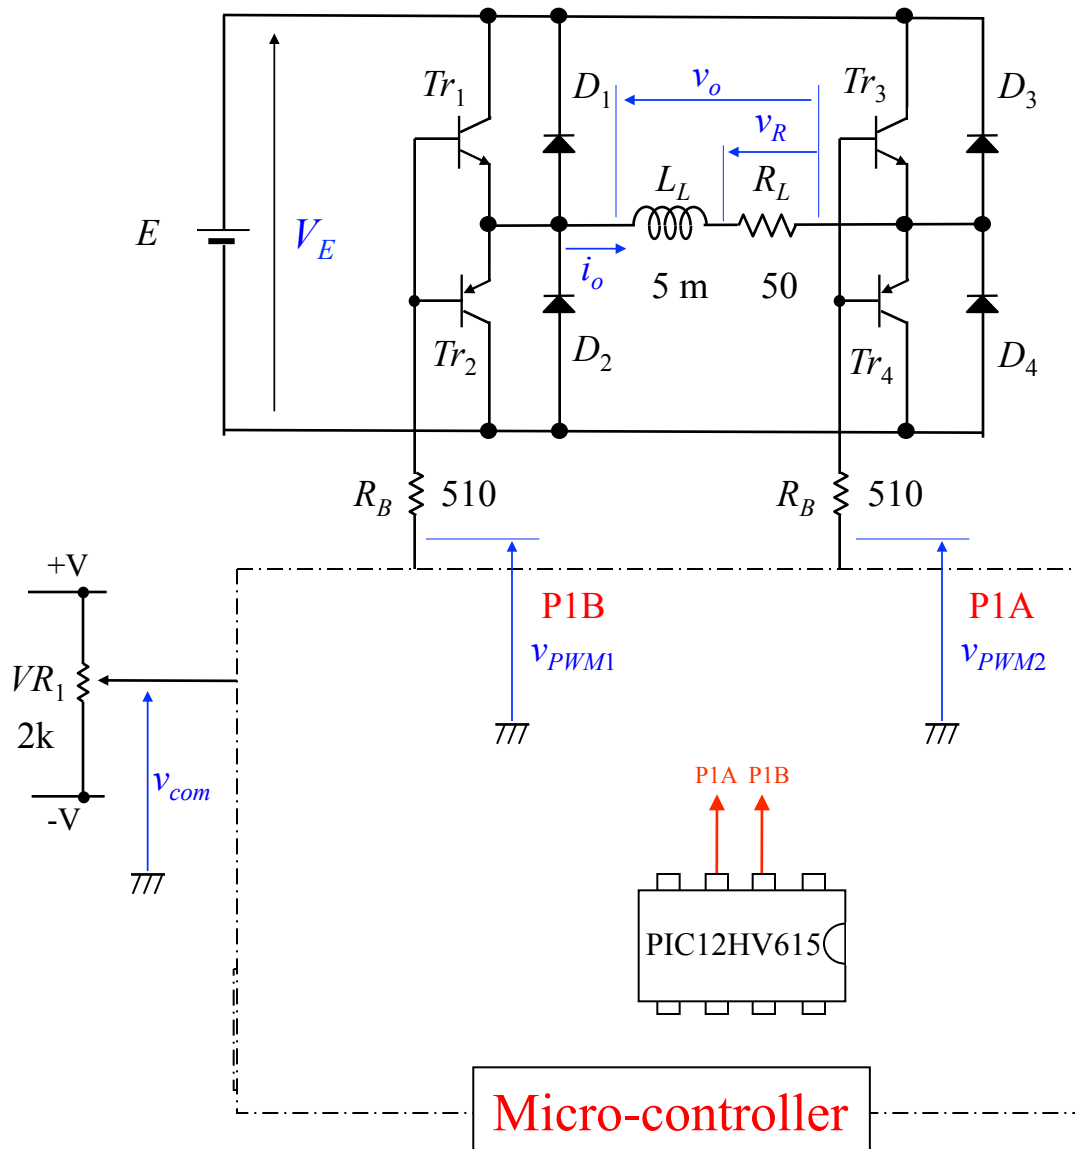

(a) Chopper for forward driving/braking (b) Chopper for backward driving/braking

Full-bridge inverter

If $v_{com} \geq v_{tri}$

Tr_1 ON, Tr_3 OFF
 Tr_2 OFF, Tr_4 ON

If $v_{com} < v_{tri}$

Tr_1 OFF, Tr_3 ON
 Tr_2 ON, Tr_4 OFF

(10.1)

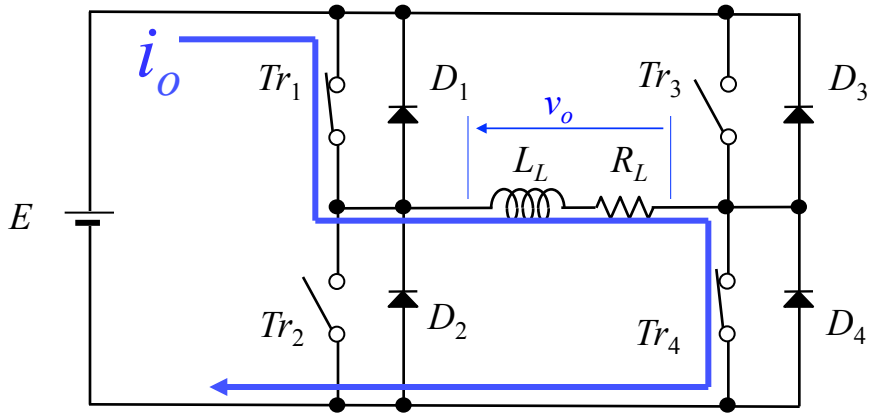

Full bridge inverter and controller

PWM control scheme and output voltage
 $(v_{com} > 0)$

PWM control scheme and output voltage
 $(v_{com} < 0)$

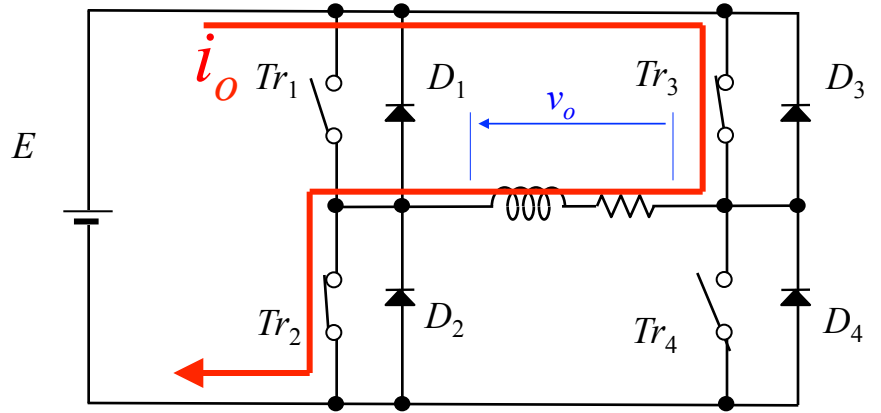

(a) $i_o > 0$, Tr_1, Tr_4 :ON, Tr_2, Tr_3 :OFF, $v_o = V_E$

(b) $i_o > 0$, Tr_1, Tr_4 :OFF, Tr_2, Tr_3 :ON, $v_o = -V_E$

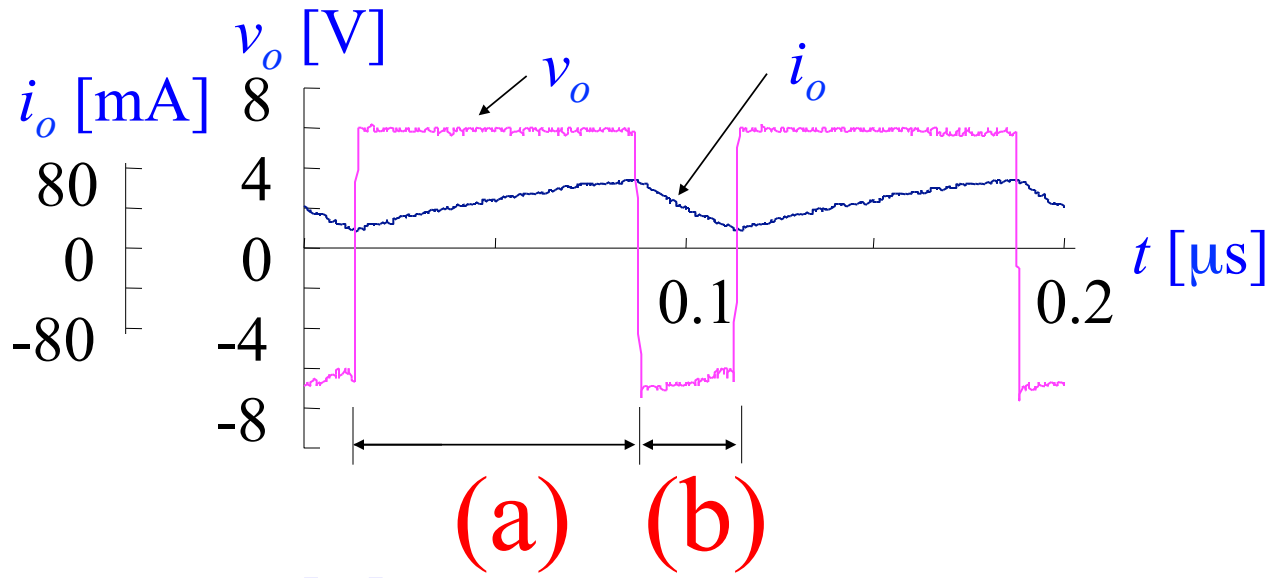

(c) $i_o < 0$, Tr_1, Tr_4 :ON, Tr_2, Tr_3 :OFF, $v_o = V_E$

(d) $i_o < 0$, Tr_1, Tr_4 :OFF, Tr_2, Tr_3 :ON, $v_o = -V_E$

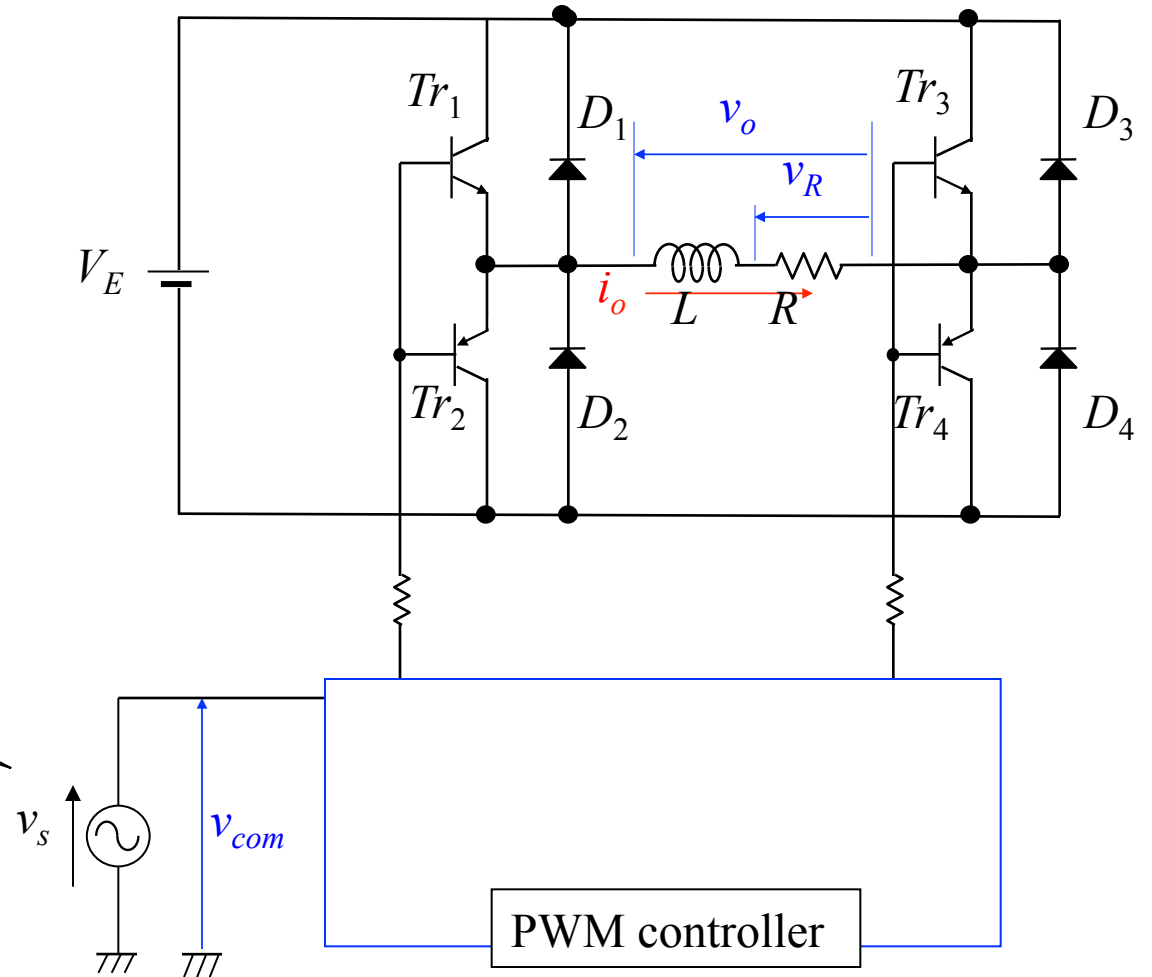

Four modes of the PWM control scheme

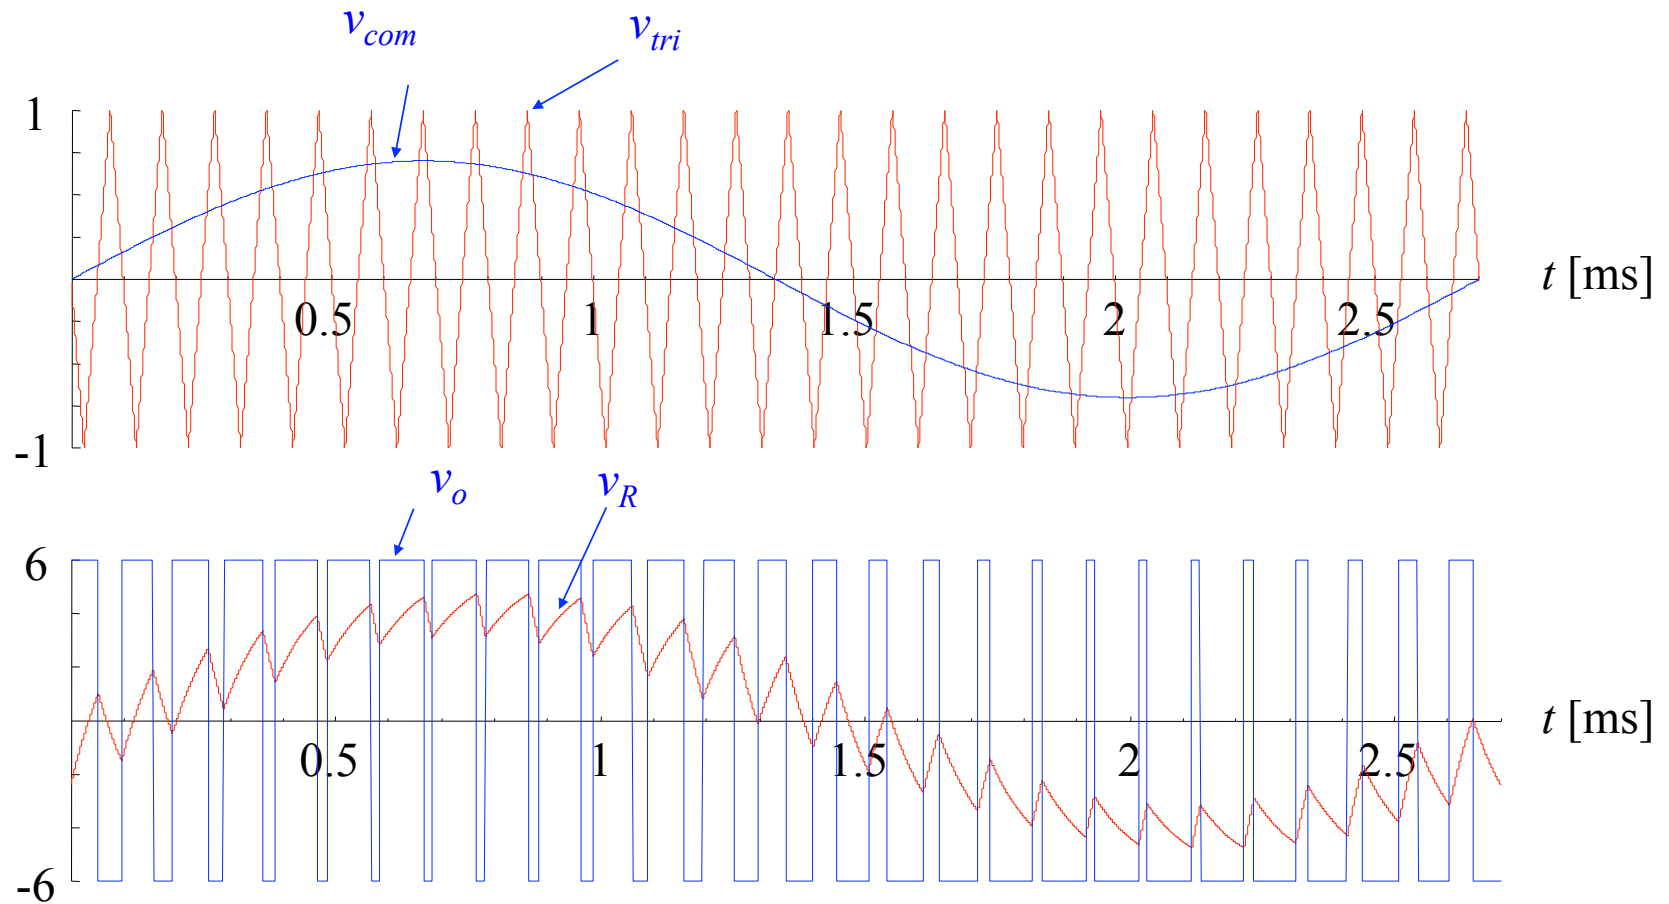

Output voltage and current of the PWM inverter

AC inverter

AC signal
can be
applied.

AC voltage output by a full-bridge inverter

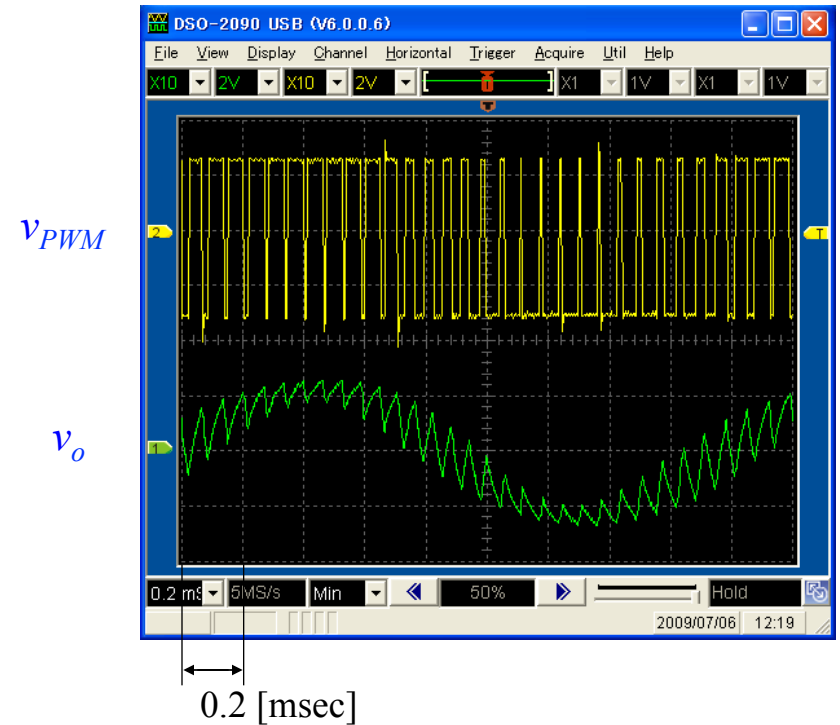

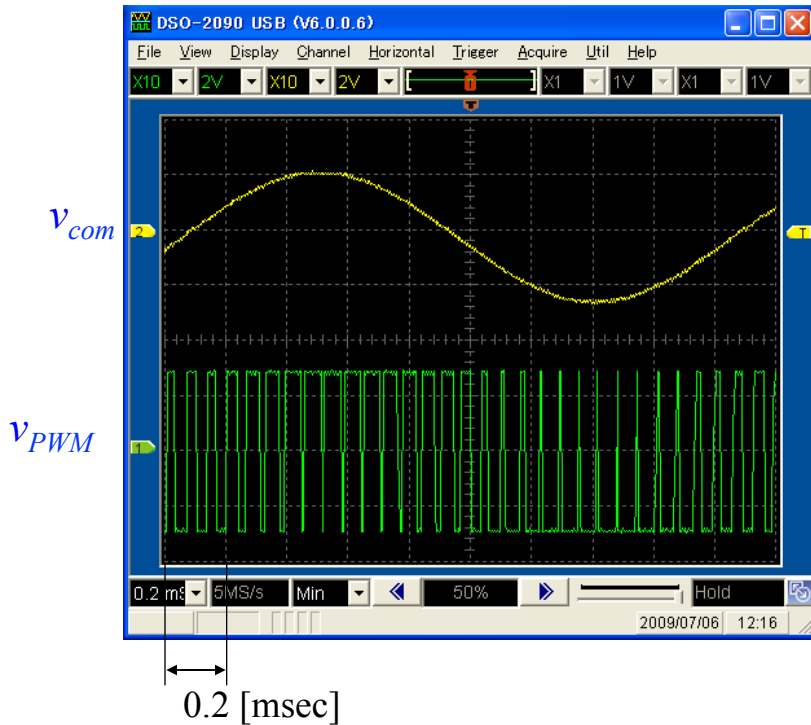

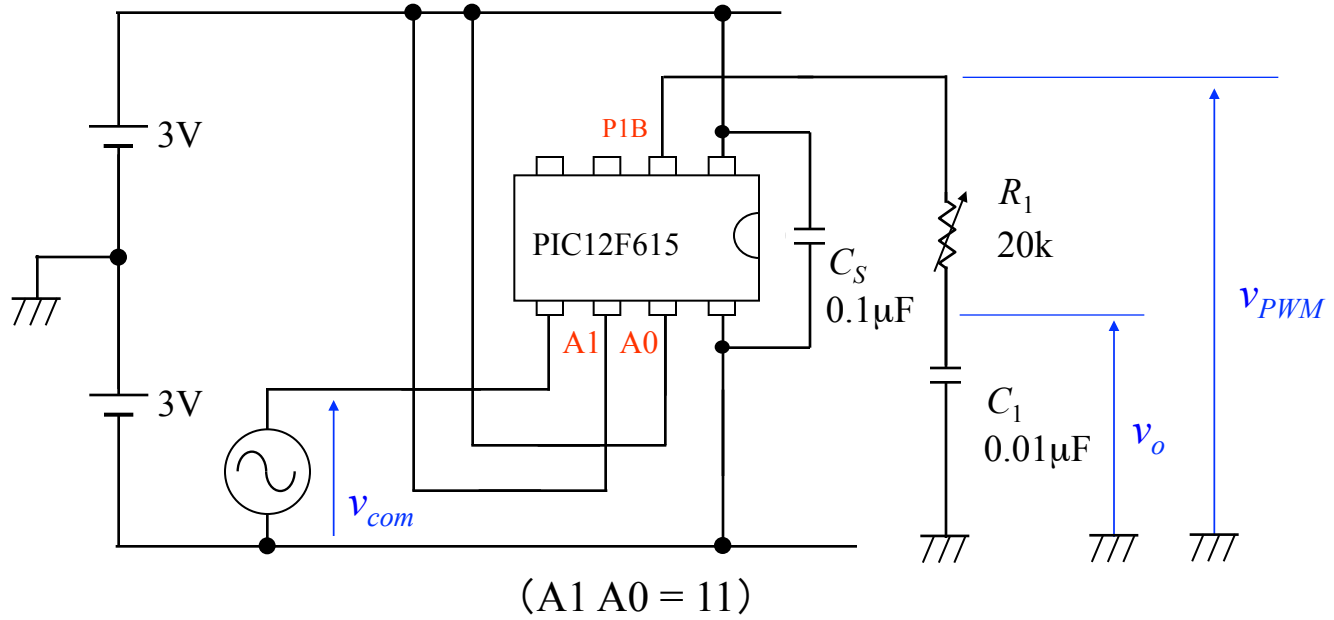

Output voltage v_o and voltage across resistor v_R ($f_{com} / f_{tri} = 1/27$)

Experiment

$$f_{com} / f_{tri} = 1/27$$

$$f_{com} = 555 \text{ [Hz]}$$

$$f_{tri} = 15 \text{ [kHz]}$$

Four modes of the PWM control scheme
