

Contents

1	Linear operators on a Hilbert space	5
1.1	Hilbert space	5
1.2	Bounded operators	7
1.3	Special classes of operators	8
1.4	Operator valued maps	9
1.5	Unbounded operators	10
1.6	Resolvent and spectrum	12
1.7	Spectral theory for self-adjoint operators	14
	1.7.1 Stieltjes measures	14
	1.7.2 Spectral measures	15
	1.7.3 Bounded functional calculus	17
	1.7.4 Spectral parts of a self-adjoint operator	18
2	C^*-algebras	21
2.1	Banach algebras	21
2.2	Spectral theory	23
2.3	The Gelfand representation	25
2.4	Basics on C^* -algebras	27
2.5	Additional material on C^* -algebras	33
3	Crossed product C^*-algebras	37
3.1	Locally compact groups	37
3.2	Locally compact abelian groups	42
3.3	C^* -dynamical systems	44
3.4	Crossed product algebras	46
3.5	Invariant ideals and crossed product	50
4	Schrödinger operators and essential spectrum	53
4.1	Multiplication and convolution operators	53
4.2	Schrödinger operators	56
4.3	Affiliation	57
4.4	\mathfrak{J} -essential spectrum	60
4.5	Orbits and essential spectrum	62

5	Twisted crossed product C^*-algebras	67
5.1	Twisted C^* -dynamical systems	67
5.2	Twisted crossed product algebras	69
5.3	Group cohomology	71
5.4	Standard twisted crossed products	74
6	Pseudodifferential calculus	79
6.1	The Weyl calculus	79
6.2	Generalized pseudodifferential algebras	81
7	Magnetic systems	85
7.1	Magnetic twisted dynamical systems	85
7.2	Magnetic pseudodifferential calculus	89
7.3	Magnetic Schrödinger operators	91
7.4	Affiliation in the magnetic case	93
